

## Gas Valve Seat Boring Machine T8590A

### T8590A BORING MACHINE FOR GAS VALVE SEATS

The machine tool suits the needs of various cylinder cover for every engine. It can manufacture the gas valve seats hole for cylinder cover with various angles. When equipped with boring-drilling tools, it can bore, drill, ream the pipe seats hole for gas valve or repair it.

#### Characteristics:

- 1, It's adopted floating worktable and adjustable special clamps, easy operation and high precision.
- 2, It can be widely used with many knives and Positioning Mandrel.
- 3, Equipped with vacuum test equipment, It's rapid-checking and non-pollution.
- 4, Equipped with Cutter grinder, with long use life and save cost.
- 5, Knives can be multi-used.
- 5, It is suitable for boring, drilling, reaming.
- 6, It meets requirement of processing valve seat of all sorts.

#### SPECIFICATION

|                                   |                                    |
|-----------------------------------|------------------------------------|
| <b>Main cylinder moving range</b> | 1000×340×160mm                     |
| Main cylinder rotating speed      | 180                                |
| Slide moving range                | Transverse 860<br>Longitudinal 120 |
| Swiveling range                   | 0~7degrees                         |
| Rotating range                    | -30degrees~+30degrees              |
| Boring machine diameter           | Φ25~Φ90                            |
| Main motor power                  | 1200Kg                             |
| Max ex-size of lid                | 1300×800×1980                      |
